DETAILED ACTION

Response to Amendment

1. In view of the amendment received on 8/28/08, the cancellation of claim 1 is acknowledged.
2. In view of the amendment received on 8/28/08, the 35 U.S.C. 103 rejection of claims 1-5 is withdrawn.
3. The amended title was received on 8/28/08. The new title is acceptable; therefore, the objection to the specification is withdrawn.

Response to Arguments

4. Applicant's arguments, see pages 9-14, filed 8/28/08, with respect to amended independent claims 2-5 have been fully considered and are persuasive. The rejections of claims 2-5 have been withdrawn.

Allowable Subject Matter

5. Claims 2-5 are allowed over the prior art of record.
6. The following is an examiner's statement of reasons for allowance: The present invention is directed to a transmitter for averagely suppressing the variation in input level of an amplifier according to variation in carrier level. Each independent claim identifies the uniquely distinct features such as the peak suppressing section for detecting whether there exists a peak by comparing a ratio between the instantaneous power and the mean power of the sum of power levels of inputted carriers with a predetermined peak factor threshold value and outputting the carriers the power levels of which are suppressed such that the power of each carrier after the combination

becomes specified power by uniformly multiplying the multiplication factor corresponding to the sum of power levels for each carrier when the peak is detected, the input power calculating section, the output power calculating section, the monitoring section for determining the gain value based on the mean input power level calculated by the input power calculating section and the mean output power level calculated by the output power calculating section and outputting the gain value as level control information which controls the signal level of the multi-carrier signal, and the level adjusting section. The closest two prior arts, Ode et al. (U.S. PG-PUB NO. 2001/0007435) discloses a distortion compensation apparatus for correcting the size of a distortion compensation coefficient in such manner that a transmit signal that has undergone distortion compensation will not exceed the dynamic range of a DA converter; and Hongo et al. (U.S. PATENT NO. 6,931,239) discloses a peak limiter for use in a system for amplifying a multi-carrier signal receives a baseband signal of each carrier of the multi-carrier signal, either singularly or in combination, fail to anticipate or render the above features obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
